Coding Tip

If you need to make an overridable function
make an abstract class
and abstract function without a body.
Then inherit from the class
and write the function with the "override"
keyword.

.NET 6.0 Preview 7.0 is now out!

The new preview was released on 08-10,
and features more features that are going to be
in the .NET 6.0 full release.

Amazing Projects from around the world!

ReCT - ReCT is a programming language made by a teenager from Germany.
Link It is coded in C# and features a syntax that was inspired
by many different languages.

Number Guessing Game - This number guessing game was created by a
young lad from Italy. It features a nice
new system that generates a random number
and the user has to guess that random number.

Exercise

Welcome to today's exercise!
After you make the exercise in any of the .NET languages, please send it to my discord that is
mentioned in the bottom of the newspaper and I will include it in the next newspaper.

*Exercise: Make an application that calculates the BMI of a person then writes it in red if it's overweight, yellow
if it's underweight, and green if it's just right.*
